

1991 Energy Functional Plan

“The State must go further to reduce our dependence upon imported fossil fuels and our vulnerability to supply disruptions. An integrated approach — one which combines and coordinates the efforts of Hawaii's public and private efforts in energy-related activities — is essential to our achievement of the State's major energy objectives”

1991 Energy Functional Plan

“A reduction of our dependence on oil and fossil fuels can be achieved by a balanced combination of demand reduction through the development of conservation and energy efficiency resources and the displacement of fossil fuels with new energy sources through alternate and renewable energy resource development.”
